A Z I E N D A

c o m p a n y

Da più di un decennio, abbiamo posto al centro dei nostri valori il design, la ricerca e la sostenibilità. Ogni singolo prodotto che concepiamo è realizzato con passione e dedizione, prendendo forma con cura e attenzione nei nostri stabilimenti di Civita Castellana (VT).

For over a decade, we have placed design, research, and sustainability at the core of our values. Each and every product we conceive is crafted with passion and dedication, taking shape with care and attention in our facilities in Civita Castellana (VT).

MANIFATTURA

manufacturing

Siamo un'azienda in cui l'artigianato si mescola armoniosamente con la tecnologia d'avanguardia. Qui, operai, tecnici e designer collaborano fianco a fianco per creare prodotti di qualità superiore. Attraverso l'uso di strumenti moderni come il forno tunnel e un'elevata meccanizzazione, seguendo i principi dell'industria 4.0, abbiamo trasformato due unità produttive in un luogo dove l'innovazione e la tradizione si incontrano. Su una superficie di 30.000 metri quadrati, produciamo con orgoglio fino a 180.000 pezzi all'anno, mantenendo sempre alti i nostri standard di eccellenza.

We are a company where craftsmanship harmoniously blends with cutting-edge technology. Here, workers, technicians, and designers collaborate side by side to create products of superior quality. Through the use of modern tools such as the tunnel oven and high mechanization, following the principles of Industry 4.0, we have transformed two production units into a place where innovation and tradition meet. Across an area of 30,000 square meters, we proudly produce up to 180,000 pieces annually, always maintaining our high standards of excellence.

C I C L O P R O D U T T I V O production cycle

1. Modellazione del prototipo:

Si inizia modellando un prototipo maggiorato e controdeformato, considerando le trasformazioni che avvengono durante le fasi di essiccazione e cottura del manufatto.

Prototype Modeling: The process begins by modeling an enlarged and counter-deformed prototype, considering the transformations that occur during the drying and firing stages of the artifact.

2. Realizzazione dello stampo:

Dal prototipo viene realizzato uno stampo originale in gesso, che servirà da matrice per la produzione in serie degli stampi.

Mold Making: From the prototype, an original plaster mold is created, which will serve as a template for mass production of molds.

3. Colaggio della materia prima:

Il passaggio successivo è il colaggio della materia prima liquida all'interno dello stampo. Dopo circa due ore, il manufatto viene estratto ancora umido dallo stampo.

Casting of Raw Material: The next step is the casting of the liquid raw material inside the mold. After about two hours, the artifact is removed while still wet from the mold.

4. Rifinitura: Dopo 24 ore, il manufatto viene rifinito a mano o roboticamente, per garantire una superficie liscia e uniforme.

Finishing: After 24 hours, the artifact is hand or robotically finished to ensure a smooth and uniform surface.

5. Essiccazione forzata:

Il prodotto viene posto in essiccazione forzata per almeno 15 ore, per eliminare l'umidità residua e prepararlo alla successiva fase di verniciatura.

Forced Drying: The product is placed in forced drying for at least 15 hours to eliminate residual moisture and prepare it for the subsequent painting phase.

6. Ispezione e Collaudo: Dopo l'essiccazione, il prodotto passa attraverso una fase di ispezione e collaudo per garantire la conformità agli standard di qualità.

Inspection and Testing: After drying, the product undergoes an inspection and testing phase to ensure compliance with quality standards.

7. Verniciatura: Segue la fase di verniciatura, durante la quale viene steso uno strato di smalto antibatterico aliglaze+ con un aerografo. Questo passaggio assicura una superficie resistente e facile da pulire.

Painting: The painting phase follows, during which a layer of antibacterial aliglaze+ enamel is applied with an airbrush. This step ensures a resistant and easy-to-clean surface.

8. Cottura: Il manufatto viene infine sottoposto a cottura in un forno tunnel a 1250 gradi Celsius per 36 ore. Questo processo di cottura garantisce la solidità e la durabilità del prodotto.

Firing: The artifact is finally fired in a tunnel kiln at 1250 degrees Celsius for 36 hours. This firing process ensures the solidity and durability of the product.

9. Controllo qualità:

Una volta completata la cottura, il prodotto finito è sottoposto ad un controllo qualità manuale per verificare che rispetti gli standard stabiliti.

Quality Control: Once the firing is complete, the finished product undergoes manual quality control to verify compliance with established standards.

ECO-SOSTENIBILITÀ

eco-sustainability

La nostra dedizione all'ambiente è la linfa vitale della nostra operatività. Responsabilmente, abbiamo implementato un impianto fotovoltaico da 650 kW, che produce circa 800 MWh di energia all'anno, ed è in grado di soddisfare il 60% del nostro fabbisogno energetico. Ma non ci fermiamo qui: recuperiamo il calore del nostro forno, impiegandolo nel condizionamento ambientale e in vari processi produttivi. Inoltre, attraverso il nostro impianto di trattamento delle acque reflue, non solo purifichiamo le acque di scarto, ma le riutilizziamo in un ciclo chiuso, senza sprechi né impatti ambientali. Questa è la nostra risposta rispettosa e consapevole alle esigenze del nostro pianeta. E per sottolineare il nostro impegno, abbiamo conseguito la certificazione ISO 14001 per il sistema di gestione ambientale.

Our dedication to the environment is the lifeblood of our operations. Responsibly, we have implemented a 650 kW photovoltaic system, producing approximately 800 MWh of energy annually, capable of meeting 60% of our energy needs. But we don't stop there: we recover the heat from our furnace, using it in environmental conditioning and various production processes. Additionally, through our wastewater treatment plant, we not only purify the wastewater but also reuse it in a closed-loop system, without waste or environmental impacts. This is our respectful and mindful response to the needs of our planet. And to underscore our commitment, we have obtained ISO 14001 certification for our environmental management system.

INNOVAZIONE

i n n o v a t i o n

Adottiamo il protocollo di Industria 4.0 per migliorare la nostra efficienza produttiva. Integriamo tecnologie digitali avanzate per standardizzare e controllare le nostre operazioni di colaggio, garantendo prodotti di alta qualità. Automatizziamo la rifinitura e la verniciatura con robot antropomorfi per migliorare la precisione e l'uniformità. Inoltre, stiamo implementando azzeratori di peso per la movimentazione dei manufatti, contribuendo così a creare un ambiente di lavoro più sicuro e confortevole per il nostro team. Queste iniziative ci consentono di rimanere competitivi nel mercato attuale e di soddisfare le esigenze dei nostri clienti con prodotti di qualità superiore.

We are adopting the Industry 4.0 protocol to improve our production efficiency. We integrate advanced digital technologies to standardize and control our casting operations, ensuring high-quality products. We automate finishing and painting with anthropomorphic robots to enhance precision and uniformity. Additionally, we are implementing weight nullifiers for handling the manufactured items, thus contributing to creating a safer and more comfortable working environment for our team. These initiatives allow us to remain competitive in the current market and meet our customers' needs with superior quality products.

aliflush+

Aliflush+ è un sistema che crea un movimento circolare nell'acqua durante lo scarico. Questo movimento genera un potente vortice ed il risultato è uno scarico più efficace che rimuove i rifiuti rapidamente.

Oltre alle sue prestazioni, il sistema Aliflush+ è anche progettato per essere più igienico rispetto ai sistemi tradizionali. La sua azione circolare aiuta a pulire il bacino del water in modo più approfondito, riducendo la necessità di ulteriori pulizie. Inoltre, il sistema Aliflush+ è caratterizzato da un basso consumo di acqua. Questo significa che puoi risparmiare significativamente sulla bolletta dell'acqua nel tempo, contribuendo anche alla conservazione di questa preziosa risorsa naturale. Grazie ad Aliflush+, puoi avere prestazioni superiori, maggiore igiene e risparmio idrico: tutto in un unico prodotto.

Aliflush+ is a system that creates a circular movement in the water during drainage. This movement generates a powerful vortex, resulting in more effective drainage that quickly removes waste. In addition to its performance, the Aliflush+ system is also designed to be more hygienic compared to traditional systems. Its circular action helps clean the toilet bowl more thoroughly, reducing the need for further cleaning. Furthermore, the Aliflush+ system is characterized by low water consumption. This means you can save significantly on your water bill over time, also contributing to the conservation of this precious natural resource. With Aliflush+, you can have superior performance, increased hygiene, and water savings all in one product.

aliglaze+

Aliglaze+ è il nostro smalto antibatterico che viene applicato su tutti i lavabi, WC e bidet per prevenire la crescita e la diffusione dei batteri sulla superficie. Grazie alla sua formulazione unica, questo smalto è in grado di eliminare fino al 99,9% dei batteri presenti sulla ceramica, garantendo che la superficie rimanga pulita e priva di germi. La potente azione antibatterica di Aliglaze+ è attribuita alla presenza di agenti antimicrobici, tra cui ioni d'argento, titanio e zinco. Questi agenti lavorano insieme per impedire la crescita dei batteri. Ma non è solo la sua efficacia antibatterica che rende Aliglaze+ così speciale. Questo smalto è anche progettato per resistere all'usura e all'abrasione, garantendo che rimanga efficace e duraturo nel tempo. In sintesi, Aliglaze+ è la soluzione ideale per mantenere le superfici dei bagni pulite, igienizzate e sicure per l'uso quotidiano.

Aliglaze+ is our antibacterial glaze that is applied to all sinks, toilets, and bidets to prevent the growth and spread of bacteria on the surface. Thanks to its unique formulation, this glaze is capable of eliminating up to 99.9% of bacteria present on the ceramic, ensuring that the surface remains clean and germ-free.

The powerful antibacterial action of Aliglaze+ is attributed to the presence of antimicrobial agents, including silver ions, titanium, and zinc. These agents work together to prevent the growth of bacteria. But it's not just its antibacterial effectiveness that makes Aliglaze+ so special. This glaze is also designed to withstand wear and abrasion, ensuring that it remains effective and long-lasting over time. In summary, Aliglaze+ is the ideal solution for keeping bathroom surfaces clean, sanitized, and safe for daily use.

Aderiamo all'Unified Water Label, un'associazione che promuove il consumo responsabile dell'acqua, garantendo che tutti i nostri WC abbiano uno scarico medio di 3,38 litri. Scegliendo un prodotto con il marchio Unified Water Label, contribuisce a un uso più consapevole dell'acqua. Riducendo gli sprechi idrici, si risparmia energia, si diminuiscono le emissioni di carbonio e si contribuisce al risparmio economico e alla salvaguardia del pianeta.

We adhere to the Unified Water Label, an association promoting responsible water consumption, ensuring that all our toilets have an average flush of 3.38 liters. By choosing a product with the Unified Water Label, you contribute to a more conscious use of water. By reducing water waste, you save energy, decrease carbon emissions, and contribute to economic savings and the preservation of the planet.

**Green
Building
Council
Italia**

Siamo orgogliosi di essere soci del Green Building Council (GBC), un'organizzazione impegnata a promuovere la sostenibilità nel settore dell'edilizia. Essere parte del GBC riflette il nostro impegno per l'ambiente e la sostenibilità, e ci permette di contribuire attivamente alla trasformazione del settore verso pratiche costruttive più responsabili. Attraverso la nostra partnership con il GBC, collaboriamo con altri leader del settore per promuovere edifici verdi e ridurre l'impatto ambientale delle nostre attività.

We are proud to be members of the Green Building Council (GBC), an organization committed to promoting sustainability in the construction industry. Being part of the GBC reflects our dedication to the environment and sustainability, allowing us to actively contribute to transforming the sector towards more responsible building practices. Through our partnership with the GBC, we collaborate with other industry leaders to promote green buildings and reduce the environmental impact of our activities.
